

RICOH Cumo-nect Office

Unlock more functionalities and web services through your secured RICOH multifunction printer

RICOH Cumo-nect Office simplifies and automates your time-consuming document workflows, seamlessly routing documents to supported cloud repositories/applications and increasing your productivity as a result.

Each RICOH Cumo-nect Office package is designed to reduce wasted prints, improve user convenience with pull printing, support authentication — including card authentication — at your devices, help you stay on top of toner replacements and keep your print fleet running with device management tools. You can also improve data collection for decision-making processes with utilisation reporting features.

Why RICOH Cumo-nect Office?

- Protect document privacy with device-level authentication, including card, PIN or user ID login methods
- Centralise user authentication lists for multiple devices in the cloud
- Send documents to a secured print queue in the cloud and print from any device in the group when ready with pull printing
- Enable mobile printing without requiring direct network connectivity
- Know the status of your print fleet and view device counters with device management tools
- Understand how your devices are being used with utilisation reporting features

Increase accountability with authentication

It is easy to authenticate and access networked multifunction printers with our user-friendly device authentication features — including card authentication for HID®, HID® iClass, Mifare® and more. Once authenticated, valid users can perform print, copy, scan, fax and/or document server functions according to their permissions. Centralise user lists for all of your devices, in the cloud, for streamlined maintenance.

Enhance security with pull printing

Confidential information leaks can be as simple as forgotten prints left in the paper tray. With our pull printing features, users can submit print jobs to a secured print queue in the cloud. When they are ready to collect the prints, simply approach any enabled multifunction printer in the group and authenticate to release their print jobs.

Simplify printing and scanning for mobile users

In today's mobile work environment, your teams need to be able to conduct business securely from anywhere. Extend the same security and convenience to their mobile devices with secured print release. This enables each authorised user to submit print jobs from anywhere — without needing a print driver — and pick them up at their convenience. They can also scan and digitise their documents to various supported cloud repositories/applications. This way, you provide a better experience and improve productivity, all without compromising privacy.

Get information of your print fleet at a glance with device management and utilisation reporting

Make informed decisions to keep office operations running smoothly with our device management tools and utilisation

reports. Receive preventative alerts when toner or paper levels are low. Know which devices are being used the most without manually tallying print and copy counters. View activity details — such as colour vs. black-and-white — by authenticated user or device. With such information at your fingertips, you can keep track of costs and environmental savings with ease.
